... WebLaunch.

WebFind can be used to search on the Web and has an unusual approach to Web searching. Conventional Web searches generally involve visiting a **search engine** Web site such as Lycos or Yahoo, whereas WebFind **simultaneously** hits all the major **search engines** when it **searches**. It then collates and 'de-dupes' the results, firing up your browser to present them. Search options are slightly limited, but this is a small trade-off for the convenience of performing comprehensive searches using every major **search engine**. You also get a search tips button for more efficient searching.

NetFileFind searches FTP sites -- it lets you search for exact or partial matches on...

...another Internet FastFind tool, EasyFTP, to retrieve the files. This utility adds a list of popular FTP sites to the end of Explorer's drive **tree**, letting you manipulate files located on FTP servers in exactly the same way as you would files on your hard disk. You can even drag...

... Web server to dig up sites with the program--and sporting an easier-to-use interface, WebCompass lets you craft inquiries, poll multiple Net-based **search engines simultaneously**, and organize what you've found.

It's fairly easy to set up new searches, thanks to the topic wizard. Pick from the available **search engines** --or add your own choices--then sit back and let the software do the work. A list of documents, ranked by keyword relevance, appears. Click on any one, and your preferred browser heads to the site.

One of its neatest tricks is its ability to organize pages in a **hierarchical tree** structure. Look for "online banking," for example, and you can build subtopics ranging from "online bill payment" to "security" under that topic. The interface is...

...may overwhelm you. But for dedicated digital detectives, WebCompass makes it easy to get lucky.

WebCompass 2.0 uses a big bunch of Net-based **search engines**. And you can also add new ones if you want.

... draft patent application, full patent specification, or an engineering memorandum, the system absorbs the relevant content and returns a list of related patents. The concept **search engine** consists of thirty-two **parallel** processors utilizing 20 gigabytes of RAM to process the 80 gigabytes of patent text.

Current online search services are severely limited by the requirements of using Boolean searching logic to find matching key words, as well as the restricted fields of the classification system's **hierarchical** structure. The alternative is to hire a professional search firm to conduct a manual search.

According to a 1993 study conducted by Hamilton Consultants based...

...TEXT: search engines, are available for free to anyone who has access to the World Wide Web (WWW).

They fall into two categories called spiders and **hierarchical** organizers. Spider search engines use an automated program to collect the entire content of each web page that is encountered. This content is then added...

... them out-and the easiest way to try multiple search engines simultaneously. SavvySearch and Metacrawler are the best sites that allow you to use multiple **search engines** at the same time. This is a quick way for you to see the advantages of performing different types of searches using different **search engines**. Keep in mind that the interface of these multi- **search engines** is very basic, however, and SavvySearch recommends that you visit the **search engines** directly to perform more powerful searches. This is particularly true of AltaVista and InfoSeek, which allow for very detailed searches.

(Table Omitted)

Captioned as: WEBSITES

When you begin to use **search engines** on a regular basis, take a look at the Help, Frequently Asked Questions (FAQ) or tips section. Some **search engines** allow you to narrow your searches using the operators AND, OR and NOT, while others let you restrict your search to a phrase, government WWW sites or images. Using the full capabilities of the **search engine** can save you from frustrating and time-consuming searches. I recommend AltaVista and Yahoo, but I encourage you to try them and decide for yourself.

While **search engines** attempt to catalog the entire Internet, other sites concentrate on smaller categories of information, such as trucking related issues. TrukLink Truckers.com and Truck Net...

...TEXT: by the nanosecond. While there is no single, perfect way to track down the information desired, there are ways to see the forest through the **trees**. Just as in that famous first trip to the library, one simply needs to find the right "card catalog" to discover where to locate the best information.

When it comes to the Internet, these sources are defined as **search engines**, web directories, newsgroups and hotlinks.

START YOUR ENGINES

To start, let's define the terminology. **Search engines** try to replicate a complete record of web sites using software agents-called spiders-that go from one URL (web site address) to another, visiting...

... key words, phrases, etc.) and the amount of relevant information obtained varies widely, which is often why searching for the exact same information using different **search engines** will produce different information.

- . In a **search engine** review in the May, 1996, issue of Internet World magazine, InfoSeek Guide took top honors for relevant search results. For the most comprehensive results, the...

... a mega-engine offering a massive listing of over 21 million web pages containing over 8 billion words.

One can also do a "metasearch," which **simultaneously searches** several engines at once. SaavySearch and Internet Sleuth both feature a single **search engine** that does searches on several databases at once. To find not these and a wide selection of other engines, plus other online directories, check out The Big **Search Engine** List.

Web directories house huge databases of web sites, newsgroups, and other information sources by category, and typically screen all submissions. The best known is...
